Harmonic crystal, master formula
displacement correlations; nuclear operators
Chaps. 5, 8
q inside the zone: one phonon
One acoustic phonon
long-wavelength limit; sound speeds; light and heavy mediators
Sect. 11.1; Limit Checks 11.1-11.3
couple to charge
Optical phonons, polar crystals
phonon loss function; Born charge; band integral
Sect. 11.2; Limit Checks 11.4-11.7
above the zone: all phonon orders
Multiphonon response
n-phonon terms; incoherent approximation; exact weights
Sect. 11.3; Limit Checks 11.8, 11.9
couplings that vary by site
Nuclear spins and isotopes
broadband response; mass defect; B − L vector
Sect. 11.6; Limit Checks 11.15, 11.16
large q: orders merge into one peak
Impulse limit and free recoil
peak at E_R; free recoil with the Helm form factor
Sect. 11.4; Limit Checks 11.10, 11.11
fix the crystal orientation
Anisotropy
rate at fixed orientation; daily modulation
Sect. 11.7; Limit Check 11.17
add cubic and quartic terms
Anharmonic and quantum crystals
cubic decay; Markov-Krein band; solid helium
Sect. 11.5; Limit Checks 11.12-11.14
absorbed, not scattered
Absorption on phonons
single phonon; acoustic modes of a finite body
Sect. 11.8; Limit Checks 11.18-11.20
truncations as nuisances
Nuisance parameters
truncations; sound speeds and Born charges
Sect. 11.9
