(a) $|\mathbf{q}| = 1.0$ keV, $T \to 0$
TA exciton replica
sum
TA (two branches)
LA (forbidden on the axis)
optical (three branches)
$\bar{S}^{PA}/C$ (meV^2)
$\omega - E_g$ (meV)
(b) onset exponents
TA, $\hat{\mathbf{q}}$ on the axis: x^2
TA, averaged
x^3 asymptote
LA, averaged
x^4 asymptote
x, distance from the on-axis onset (meV)
