(a) the two helicities, right-handed crystal
absorption, arbitrary units
optical q: S_-
optical q: S_+
dark-matter q (split ×4): S_-
dark-matter q (split ×4): S_+
left-handed crystal:
$S_+ \leftrightarrow S_-$
ω/E_g
(b) dissymmetry against $|\mathbf{q}|$
dissymmetry $|S_- - S_+|/(S_- + S_+)$
linear term (gyration tensor)
schematic finite-q odd part
optical
dark matter
(1–3 eV)
$|\mathbf{q}|$ (keV)
