BCS state, master rate
quasiparticles, coherence factors, Nambu;
conserving response; rate from L
Sects. 7.2, 8.2, 10.2
current vertex,
$q \to 0$
Absorption
Mattis-Bardeen and
phonon-assisted (Holstein)
Sect. 15.4; Limit Check 15.3
density row of the master rate;
time-dependent mean field
Conserving density response
quasiparticle bubble + pair-field ladder,
screened by the Coulomb interaction
Sect. 15.1; Limit Check 15.1
resum the
screening
Kinematic edge
screening resummed on
the line $q = \omega/v_{max}$
Sect. 15.2; Limit Check 15.2
drop the pair-field ladder
add impurity
scattering
Bare quasiparticle bubble
case-I coherence factor in $\mathrm{Im}\,\varepsilon$;
first-order shift of $\mathrm{Re}\,\varepsilon$
Sect. 15.1
Films and disorder
relaxation-time forms;
the dirty limit
Sect. 15.3
$\Delta_{BCS} \to 0$
Lindhard loss function
normal metal, no gap;
pair breaking as electron-hole pairs
Sect. 15.1
