section
Electronic
Electron recoil, Si, 1–10 MeV
10.10
Velocity couplings; Ge 3d core
10.4, 10.6
Phonon-assisted window, Si
13.9
Zero-phonon edge, Ge
13.9, 17.1
Lattice and Migdal
Nuclear recoil, Si lattice
11.9
Polar phonons, GaAs
11.9
Anharmonic and quantum crystals
11.5
Migdal effect, Si, below 3 MeV
12.3, 12.4
Migdal ranking of crystals
17.5, 21.7
Heavy-mediator ranking
17.6, 21.7
Spin, superconducting, novel
Magnons, NiO
14.1
Superconductor, Al
15.2
Dirac crystal, $ZrTe_5$
16.1, 16.9
Strong-coupling Dirac; dense donors
16.1, 16.5
Two-level systems in glass
16.7
Measurement chain
Recoil charge below 352 eV
19.2
Pair statistics, Si charge readout
18.3, 18.5
Pair energies of new crystals
18.4, 21.7
Phonon collection, stored energy
19.5, 20.5
Delayed signals, low-energy excess
19.6, 20.1
Internal backgrounds
21.7
Published limits
Fermionic absorption; boosted recasts
10.9
