Crystal form factor
independent-particle structure factor; sum rules
Sect. 10.1
screen: divide by $|\varepsilon|^2$
Loss-function rate
random-phase screening, then local fields; sum-rule bounds
Sect. 10.2; Limit Checks 10.1, 10.2
add the electron-hole attraction
Excitons at finite momentum
Bethe-Salpeter rate; bound lines below the gap
Sect. 10.5; Limit Check 10.5
many-body spread
Theory uncertainties
many-body spread; gap and threshold
Sect. 10.10
collective mode
The plasmon
pole of the electron gas; threshold speed; decay
Sect. 10.3; Limit Check 10.3
spin and current rows
Spin and current couplings
minimal response table; singlet and triplet blocks
Sect. 10.4; Limit Check 10.4
large q: core shells
Core and relativistic states
core shells within reach; relativistic corrections
Sect. 10.6
absorbed, not scattered
Absorption on electrons
dark photon, axion-like particle, scalar; in-medium mixing
Sect. 10.7; Limit Checks 10.6, 10.7
second order in the coupling
Two-insertion processes
pair absorption; dark Compton scattering
Sect. 10.8; Limit Check 10.8
inelastic, fast, fermionic
Inelastic and fast dark matter
exothermic; boosted; fermionic absorption; in-medium decay
Sect. 10.9; Limit Check 10.9
